

ALPINE HAY

The eco-friendly coating

Alpine **hay** by **Organoid** is an **eco-friendly** covering proposal in which the raw material, after being processed at high pressure and high temperature, is applied to a 4 mm thick cork support.

The properties of the coating remain intact during the production process, allowing **the natural components of which it is composed to be perceived by smell**. It is also possible to add elements, such as petals of different colors or daisies, to personalize the floor decoration.

Alpine hay can be combined with both a calcium sulphate support and a wooden chipboard support, in the 60×60 cm, 60×120 cm or 60×120 cm formats with 30×120 cm slats.
